# Lesson 2: Fundamentals of Twitter Bootstrap

# INTRODUCTION

- What is Bootstrap?
  - It is a open source front-end CSS framework for faster and easier web development
  - Includes HTML and CSS based design templates for

- **Typography**
- **Forms**
- **Buttons**
- **Tables**
- **Navigation**
- **Modals**
- **Image carousels**
- **As well as optional JavaScript plugins**

# INTRODUCTION

- Gives us the ability to easily create responsive designs
- Responsive Design?
  - Creating web sites which automatically adjust themselves to look good on all devices, from small phones to large desktops.
- It was developed by Mark Otto and Jacob Thornton at Twitter
- And released as open source product in August 2011 on GitHub

# INTRODUCTION

- Why Bootstrap?
  - **Easy to use:** Anybody with just basic knowledge of HTML and CSS can start using it
  - **Responsive features:** adjusts to phones, tablets, and desktops
  - **Mobile-first approach:** In Bootstrap 3, mobile-first styles are part of the core framework
  - **Browser compatibility:** Bootstrap is compatible with all modern browsers
    - Eg. Chrome, Firefox, Internet Explorer, Edge, Safari, and Opera

# GETTING STARTED

- **Getting Bootstrap**
- Two ways
  - Download from <https://getbootstrap.com/docs/3.3/> OR
  - Include Bootstrap from a CDN

# GETTING STARTED

- Download from <https://getbootstrap.com/docs/3.3/>
- Download all files and dependencies of bootstrap as compressed zip file.
- Then add it to your project as an external CSS file

Download Bootstrap

Currently v3.3.7

6

# GETTING STARTED

- Include Bootstrap from a CDN
  - If you want it from online repository as external CSS, you can include it from external CDN (Content Delivery Network)
  - You can find a number of CDN providers but for this lesson we are going to use the following.

# GETTING STARTED

```
<!-- Latest compiled and minified CSS -->
```

```
<link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css">
```

# GETTING STARTED

```
<!-- jQuery library -->
```

```
<script src="https://ajax.googleapis.com/ajax/libs  
/jquery/3.3.1/jquery.min.js"></script>
```

# GETTING STARTED

```
<!-- Latest compiled JavaScript -->
```

```
<script src="https://maxcdn.bootstrapcdn.com/bootstr  
trap/3.3.7/js/bootstrap.min.js"></script>
```

# GETTING STARTED

- **Advantage of using CDN**
  - Faster loading time.

Many users already have downloaded Bootstrap from MaxCDN when visiting another site. As a result, it will be loaded from cache when they visit your site, which leads to faster loading time.

Also, most CDN's will make sure that once a user requests a file from it, it will be served from the server closest to them, which also leads to faster loading time.

# GETTING STARTED

- **jQuery**
  - Bootstrap uses jQuery for JavaScript plugins (like modals, tooltips, etc).
  - But, if you use only the CSS part of BS, you don't need jQuery

# CREATE 1<sup>ST</sup> WEB PAGE

- Add the HTML5 doctype
  - BS uses HTML elements and CSS properties that require the HTML5 **doctype**.

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
  </head>
</html>
```

# CREATE 1<sup>ST</sup> WEB PAGE

- Mobile-first approach:
  - To enable **m-first** for your design, add the following `<meta>` tag inside the `<head>` element.

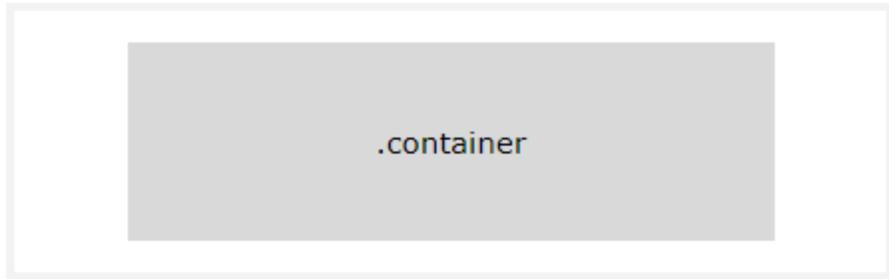

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

- The `width=device-width` part sets the width of the page to follow the screen-width of the device (which will vary depending on the device).

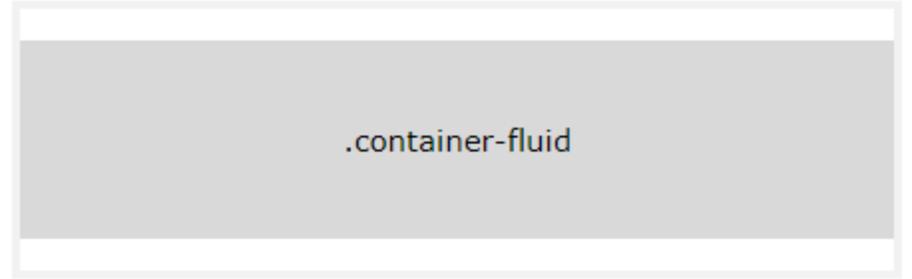

# CREATE 1<sup>ST</sup> WEB PAGE

- The `initial-scale=1` → sets the initial zoom level when the page is first loaded by the browser.
- Containers
  - BS needs a containing element to wrap site contents.
  - Two container classes to choose from:

# CREATE 1<sup>ST</sup> WEB PAGE

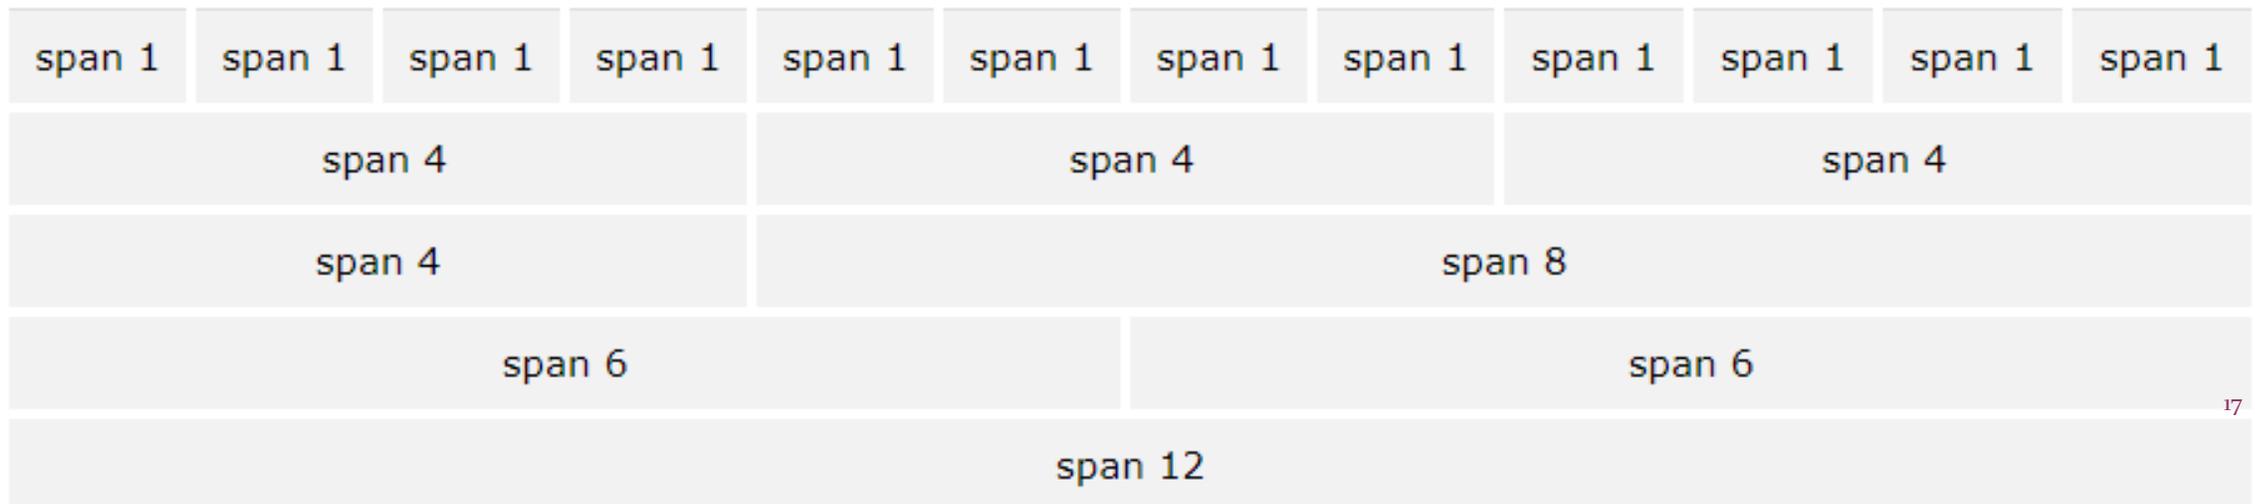

.container

.container-fluid

# BOOTSTRAP GRID SYSTEM

- Bootstrap's grid system allows up to 12 columns across the page.
- If you do not want to use all 12 columns individually, you can group the columns together to create wider columns:

# CREATE 1<sup>ST</sup> WEB PAGE

- Grid classes : 4 classes
  - **xs** (for phones - screens less than 768px wide)
  - **sm** (for tablets - screens equal to or greater than 768px wide)
  - **md** (for small laptops - screens equal to or greater than 992px wide)
  - **lg** (for laptops and desktops - screens equal to or greater than 1200px wide)

The classes above can be combined to create more dynamic and flexible layouts.

# BOOTSTRAP GRID SYSTEM

- Basic structure of grid:

```
<div class="row">
  <div class="col-*-*"></div>
  <div class="col-*-*"></div>
</div>
<div class="row">
  <div class="col-*-*"></div>
  <div class="col-*-*"></div>
  <div class="col-*-*"></div>
</div>
<div class="row">
  ...
</div>
```

# BOOTSTRAP GRID SYSTEM

## ■ Exercise:

- Create a webpage with the following grid system

span 4	span 4	span 4
span 4	span 8	
span 6		span 6
span 12		

# TEXT / TYPOGRAPHY

- **Text / Typography**

- Bootstrap's default settings:

- Global default font-size is 14px. With a line-height of 1.428
- This is applied to the `<body>` element and all paragraphs

# TEXT / TYPOGRAPHY

By default, Bootstrap will style the HTML headings (`<h1>` to `<h6>`) in the following way:

Example

h1 Bootstrap heading (36px)

h2 Bootstrap heading (30px)

h3 Bootstrap heading (24px)

h4 Bootstrap heading (18px)

h5 Bootstrap heading (14px)

h6 Bootstrap heading (12px)

[Try it Yourself >](#)

# TEXT / TYPOGRAPHY

## <small>

In Bootstrap the HTML `<small>` element is used to create a lighter, secondary text in any heading:

### Example

**h1 heading** secondary text

**h2 heading** secondary text

**h3 heading** secondary text

**h4 heading** secondary text

**h5 heading** secondary text

**h6 heading** secondary text

[Try it Yourself »](#)

# TABLES

## Tables

- Basic table

The `.table` class adds basic styling to a table:

Example

Firstname	Lastname	Email
John	Doe	john@example.com
Mary	Moe	mary@example.com
July	Dooley	july@example.com

Try it Yourself »

# TABLES

## Striped rows

The `.table-striped` class adds zebra-stripes to a table:

### Example

Firstname	Lastname	Email
John	Doe	john@example.com
Mary	Moe	mary@example.com
July	Dooley	july@example.com

[Try it Yourself »](#)

# TABLES

- **More table classes / properties**
  - **Hover rows:** The `.table-hover` class adds a hover effect (grey background color) on table rows:
  - **Condensed Table:** The `.table-condensed` class makes a table more compact by cutting cell padding in half
  - **Contextual classes:** used to color table rows
  - **Responsive tables:** automatically creates horizontal scroll bar for small device displays.
    - Use `.table-responsive` class
  - The `.table-hover` class adds a hover effect (grey background color) on table rows:

# IMAGES

## ■ Contextual classes

Class	Description
<code>.active</code>	Applies the hover color to the table row or table cell
<code>.success</code>	Indicates a successful or positive action
<code>.info</code>	Indicates a neutral informative change or action
<code>.warning</code>	Indicates a warning that might need attention
<code>.danger</code>	Indicates a dangerous or potentially negative action

# IMAGES

```

```

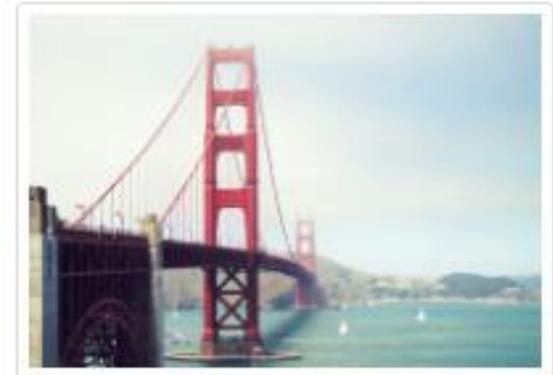

.img-rounded

.img-circle

.img-thumbnail

# IMAGES

- **Responsive images**
  - automatically adjust to fit the size of the screen.
  - Use `.img-responsive` to make the image responsive

# WELL

## Well Size

Small Well

Normal Well

Large Well

Change the size of the well by adding the `.well-sm` class for small wells or `.well-lg` class for large wells:

### Example

```
<div class="well well-sm">Small Well</div>  
<div class="well well-lg">Large Well</div>
```

Try it Yourself »

# ALERTS

- Bootstrap provides an easy way to create predefined alert messages:

**Success!** This alert box indicates a successful or positive action. ×

**Info!** This alert box indicates a neutral informative change or action. ×

**Warning!** This alert box indicates a warning that might need attention. ×

**Danger!** This alert box indicates a dangerous or potentially negative action. ×

Alerts are created with the `.alert` class, followed by one of the four contextual classes `.alert-success`, `.alert-info`, `.alert-warning` or `.alert-danger`:

# Thank You!
