MEDIA OBJECTS

- **Example explained:**

  - Use a <div> element with the .media class to create a container for media objects.

  - Use the .media-left class to align the media object (image) to the left, or the .media-right class to align it to the right.

  - Text that should appear next to the image, is placed inside a container with class="media-body".

  - Additionally, you can use .media-heading for headings.
